

TRUFLASH

NIGHTTIME EVIDENCE

Although the TruCAM® is capable of capturing images at night, the TruFlash provides clear, illuminated and fully recognizable images of a violator's license plate. The unit even connects to the TruCAM without wires with LTI's IR Link kit.

After you set up the TruFlash, toggle the TruCAM into Night Mode and add the camera lens filter to block headlight glare. This system produces black-and-white images with all the relevant violation data you'll need.

FEATURES

- Stable, rugged and portable design
- Simple plug-in and charge system
- Has self contained power source
- LED power, test and battery indicators

Includes:

- TruFlash sync cable
- TruFlash unit (comes standard with IR filter)
- Applicable charging cable (us, EUorUK)
- Operator's manual

Available Options:

- TruCAM nighttime lens filter
- Clear filter (for added illumination during daytime)
- IR Link kit
